

H&S Builder Practice Pack

A realistic set of three health and safety templates designed to be rebuilt inside the form builder: Equipment Inspection, Job Hazard Analysis, and Near Miss Report.

NUMBER

BASIC TABLE

CUSTOM TABLE

USE THIS PACK

1. Rebuild the three sections in the same order.
2. Keep the labels exactly as written the first time through.
3. Add the conditional logic and calculations shown in the workflow notes.
4. After the first pass, compare your result against the matching JSON.

What this teaches

- Sectioning a full document instead of a single flat form.
- Mixing realistic field content with builder-only training notes.
- Where to use conditionals, calculations, repeatable rows, and knowledge-check logic.

Workflows included

- Conditional notes when a status is unsafe or treatment is required.
- Calculated totals for repair cost and incident exposure.
- Repeatable data using both Basic Table and Custom Table patterns.

Replication rule

- Do not optimize on the first build. Replicate the structure first.
- Use the chips beside each field to pick the matching builder component.
- When fields are shown side by side, use a two-column example in the builder.
- If a chip includes **Conditional** or **Calculation**, read the bottom notes on that page before configuring it.
- Use the final crosswalk page if you lose track of a component.

Expected builder outcome

- Three top-level sections: Equipment Inspection, Job Hazard Analysis, Near Miss Report.
- At least three conditional fields, two calculated totals, one survey, one knowledge check, one photo upload, and both table types.
- Multiple two-column rows that should be rebuilt with a column example, not as one long single-column stack.
- A sample realistic enough to train users without looking like placeholder lorem ipsum.

TEMPLATE 1

Mobile Equipment Inspection

Build the core fields and checklist first.

EQUIPMENT INSPECTION 1 OF 2

Operator Notice

DISCLAIMER

Complete this inspection before equipment start-up. Tag unsafe equipment out of service immediately. Attach photos for any defect that needs follow-up. Escalate critical issues to the supervisor before the shift starts.

DUE DATE

ACTION COST

Bottom notes for conditional and calculation chips

- Show **Unsafe Condition Notes** only when **Equipment Status = Unsafe / Lock Out**.
- Calculate **Repair Total Incl. Tax** from **Estimated Repair Cost x 1.13**.
- Use **Basic Table** for short part rows and **Custom Table** for structured repair actions.

TEMPLATE 2

Job Hazard Analysis

This section teaches crew planning, PPE selections, permit-dependent fields, and grouped control checks.

JOB HAZARD ANALYSIS 1 OF 2

Pre-Task Briefing

DISCLAIMER

Review this JHA with the crew before work starts. Identify the highest-risk steps first. Confirm permits, PPE, and rescue planning. Use the knowledge check at the end to confirm crew understanding.

TEMPLATE 2 CONTINUED

Job Hazard Analysis

Finish the JHA with hazard rows, permit checks, and the crew knowledge check.

JOB HAZARD ANALYSIS 2 OF 2

JOB STEPS AND HAZARDS				CUSTOM TABLE + EDIT GRID
JOB STEP	HAZARD	RISK LEVEL	CONTROL MEASURE	

PERMIT CHECKS			CUSTOM TABLE + EDIT GRID
PERMIT / REVIEW ITEM	RESPONSIBLE PERSON	VERIFIED	

Crew Knowledge Check

KNOWLEDGE CHECK

When is a fire watch required?

- ☐ Only after the shift
- ☐ When hot work can create ignition sources
- ☐ Only outdoors

Select fall-protection triggers

- ☐ Open edge exposure
- ☐ Unprotected ladder opening
- ☐ Working from ground level only

Bottom notes for conditional and calculation chips

- Show **Hot Work Permit Number** only when **Hot Work Permit Required? = Yes**.
- Use **Custom Table** for both the hazard register and permit verification rows.
- Set the knowledge check pass mark to **2** and configure the answer key after the questions are added.

TEMPLATE 3

Near Miss Report

This section teaches incident capture, conditional follow-up detail, and evidence collection.

NEAR MISS REPORT 1 OF 2

Reporting Note

DISCLAIMER

Report near misses before the end of the shift. Capture what happened, what could have happened, and who needs to act. Attach evidence and assign follow-up actions.

EVENT SUMMARY

SHORT INPUT

Attach photos, sketches, or supervisor markup

TEMPLATE 3 CONTINUED

Near Miss Report

Finish the section with witness rows, action tracking, and exposure-cost calculations.

NEAR MISS REPORT 2 OF 2

WITNESSES		BASIC TABLE + DATA GRID
WITNESS NAME	WITNESS PHONE	

CORRECTIVE ACTION REGISTER				CUSTOM TABLE + EDIT GRID
CORRECTIVE ACTION	OWNER	DUE DATE	STATUS	

POTENTIAL LOSS ESTIMATE

NUMBER + CURRENCY

CONTRACTOR CALLOUT COST

NUMBER + CURRENCY

TOTAL ESTIMATED EXPOSURE

NUMBER + CALCULATION

Bottom notes for conditional and calculation chips

- Show **Treatment Details** only when **Was Medical Treatment Required? = Yes**.
- Calculate **Total Estimated Exposure** from **Potential Loss Estimate + Contractor Callout Cost**.
- Use the **Corrective Action Register** to teach repeatable action ownership and status tracking.

Component Crosswalk And Build Order

Use this page after your first build attempt. It maps every builder card to where it appears in the training pack.

Suggested build order

- Create the three sections first.
- Add the notices, then the main input fields, then the tables, then the workflow rules.
- Whenever a row is shown side by side, rebuild it with a two-column example.
- Save a draft before adding knowledge-check answer keys or calculations.
- If a chip includes **Conditional** or **Calculation**, check the bottom notes on that page before finishing the field.
- Compare against the matching JSON only after the first pass so the exercise still teaches layout decisions.

BUILDER CARD	APPEARS AS	WHERE	TEACHING NOTE
Disclaimer	Operator Notice, Pre-Task Briefing, Reporting Note	All three sections	Use for instructions before inputs.
Short Input	Inspection Purpose, Task Description, Event Summary	All three sections	Also used for conditional note fields.
Worker	Inspector, Crew Lead, Reported By	All three sections	Demonstrates managed user lists.
Choices	Status, PPE, Hot Work Permit, Medical Treatment, Potential Consequences	All three sections	Choose dropdown, radio, or select-box mode from the same builder card.
Field Group	Critical Stop Work Checks, Critical Controls	Inspection and JHA	Good for compact repeated yes/no lines.
Survey	Inspection Checklist	Equipment Inspection	Use quick options only: Safe, At Risk, N/A.
Knowledge Check	Crew Knowledge Check	JHA	Add questions first, then answer key and pass mark.
Photo	Equipment Photos, Certificates, Evidence Uploads	Inspection and Near Miss	Use the same builder card for photos and document-style uploads.

Component Crosswalk And Build Order

Keep this page beside the builder while you finish the practice pack.

CROSSWALK 2 OF 2

BUILDER CARD	APPEARS AS	WHERE	TEACHING NOTE
Phone	Supervisor Callback, Permit Contact, Reporter Contact	All three sections	Useful when training people on contact formatting.
Address	Inspection Location, Work Area, Exact Location	All three sections	One builder card, multiple embedded subfields.
Equipment	Equipment	Equipment Inspection	Shows managed equipment lookup.
Date / Time	Inspection Start, Next Service Date, Shift Start Window, Event Date And Time	All three sections	Use the same builder card for full date-time, date-only, and time-only fields.
Number	Operating Hours, currency fields, calculated totals	Inspection and Near Miss	Teaches plain number, currency, and calculated output.
Basic Table	Parts Required, Witnesses	Inspection and Near Miss	Use when the row layout is light.
Custom Table	Repair Actions, Job Steps And Hazards, Permit Checks, Corrective Action Register	All three sections	Use when every row needs specific columns.

COMPARE WITH JSON

/examples/hs-builder-practice-pack.formio.json

Use the builder's **Import JSON** modal if you want to compare your build against the sample structure.

REUSE THIS LAYOUT

/examples/hs-builder-practice-pack.html

The HTML version is the printable source for this PDF. Adjust labels there if you want a different training scenario later.
